SWITCH OVER TO THE

Zip cb SYSTEM

FOR INSTANT AND CONTINUOUS BOILING WATER, AUTOMATICALLY.

Saves staff. Saves time. Now there's no more standing around waiting for water to boil. No more switching on or watching or filling old fashioned urns. No more time and money down the drain everyday. Instead, there's an immediate cup of piping hot tea, coffee or soup whenever you want it.

Now urns and coffee machines are old fashioned. The Zip CB System totally outdates urns, kettles and jugs. Zip supercedes any coffee bar machine too. After 5 years of research and development the Zip CB System has been designed and patented in Australia. That's why the Zip CB System is so safe, efficient and hygienic. And of course it's fully automatic.

Automatic operation. It couldn't be easier or faster. The Zip CB System fills automatically. Then switches on and off and on - all automatically to keep the water always on the boil the instant it's needed. And it's very economical. Zip's heavy insulation dramatically lowers operating costs.

No more steam. Zip's unique steam condensing cowl actually traps steam *inside* the system, protecting surrounding paintwork, walls and curtains. And there's also the Zip instant flow tap. It won't drip, so there's no wastage.

Superb styling for office, home, club, canteen.

The Zip CB System is available in gleaming white baked enamel or shining stainless steel. As you can see from the photographs on the facing page, the Zip CB System not only looks attractive, it's also an efficient and proven performer. Just ask some of our clients.

Some of the companies who have switched to Zip.

Apart from the many large hospitals and nursing homes and factories already mentioned, there is also the N.S.W. Government State Contracts Board, which has specified the Zip CB System for Government departments. Branches of the Commonwealth Banking Corporation are switching over to Zip, as has the Qantas Catering Flight Facilities centre. And every floor of the new Sydney City Council Headquarters now includes a Zip CB System. Thousands of Zip Systems are installed throughout Australia.

How to buy your Zip. Just contact Zip and they'll do the rest.
